30<sup>th</sup> International Conference on

## **Adaptive Structures and Technologies**

October 7-10, 2019 Concordia University, Montreal, QC, Canada

### Welcome

On behalf of the local organizing committee, it is our great pleasure to welcome you to attend the 30<sup>th</sup> International Conference on Adaptive Structures and Technologies (ICAST2019).

ICAST2019 aims at promoting research, development and application of adaptive structures and technologies through the exchange of scientific results and insight from leading international scholars and specialists as well as the young researchers. The conference showcases the state of the art in this innovative and multidisciplinary area. It provides a forum for the discussion of recent advances in the broad fields of smart materials and structures. ICAST2019 program includes 87 technical papers, which is presented in 4 keynote speeches, 8 single sessions and 8 parallel student sessions.

We are honored to host the 30<sup>th</sup> anniversary event of the ICAST at the Conference Center of Concordia University. With your participation, we anticipate a valuable, enjoyable and memorable event.

### **Local Organizing Committee**

Ramin Sedaghati General Chair Concordia University

Subhash Rakheja General Co-Chair Concordia University

Masoud Hemmatian Technical Chair Concordia University

Yong Chen General Chair National Research Council (NRC)

Viresh Wickramasinghe General Co-Chair National Research Council (NRC)

Armin Rasooli Technical Assistant Concordia University

### **Special Events**

#### **Welcome Reception**

Tuesday, October 08, 2019, 18:30 – 20:30 Concordia University Conference Center (MB 9) – Rooms E, F. and G

#### **Montreal City Tour**

Thursday, October 10, 2019, 15:45 – 18:45

Montreal City Tour incorporates the must-see highlights of the city in few hours. The guided tour will be started from the downtown and be finished in Old Montreal. The bus will depart at 15:45 from Concordia University (Hall Building, 1455 Boulevard de Maisonneuve West, Montreal, QC, H3G 1M8). The tour will be finished at 18:45 at VIEUX-PORT STEAKHOUSE. Pre-registration is required and for those who did not pre-register, limited tickets are available at the reception desk on a first-come, first-served basis.

#### **Best Student Presentation Award**

Student Sessions are on Thursday, October 10, 2019. Student presentations will be evaluated, and the best student presentations will be awarded by ICAST 2019 at the Banquet.

#### **Banquet**

Thursday, October 10, 2019, 19:00 – 21:00 VIEUX-PORT STEAKHOUSE

Join us for a special evening at VIEUX-PORT STEAKHOUSE (39, Rue Saint-Paul Est, Montreal, QC, H2Y 1G2). For those who did not attend the Montreal City Tour, a bus will depart at 18:30 from Concordia University (Hall Building, 1455 Boulevard de Maisonneuve West, Montreal, QC, H3G 1M8). A bus will depart back to Concordia University at 21:30.

### **Plenary Speakers**

# Smart and adaptive 4D materials – hierarchical manufacturing Hani Naguib University of Toronto

**Abstract:** Smart materials related research and applications have grown tremendously in the past couple of decades. The emergence of natural and synthetic smart materials possessing a set of desired properties, along with the development of novel processing techniques and a willingness of competitive manufacturers to adopt new materials has resulted in new smart materials components replacing the roles of traditional materials.

Smart materials can also offer several benefits as components in adaptive and multifunctional materials. This seminar presents the design and hierarchical manufacturing of smart materials to achieve active 4D and multifunctional materials that are capable of sensing and responding to external stimuli with time. Examples of smart materials used in this study are shape-memory materials, piezoelectric and thermoelectric hybrids with main applications in smart textiles, artificial muscles and energy harvesting.

**Biography:** Professor Hani Naguib is a Professor at the University of Toronto, and director of the Toronto Institute for Advanced Manufacturing. His major expertise is in the area of manufacturing of smart materials and systems including: electro-active materials, metamaterials, and biomaterials. Naguib is the recipient of many honours and awards such as the Canada Research Chair, the Premier's Early Research Award of Ontario, the Canada Foundation of Innovation, and the faculty Early Teaching Award. He is a Professional Engineer in Canada, a Chartered Engineer in U.K., a Fellow of the Institute of Materials Minerals and Mining IOM3, the American Society of Mechanical Engineers ASME, the Society of Plastics Engineers SPE, the Canadian Society of Mechanical Engineers CSME, and the International Society for Optics and Photonics SPIE. Dr. Naguib is serving as Associate Editor for the IOP Journal of Smart Materials and Structures, Journal of Cellular Plastics and Cellular Polymers.

## Integrated design of magnetorheological fluid and energy absorbers for optimal system performance

Norman Wereley
University of Maryland

**Abstract:** The ability to dissipate energy in vehicle systems, especially with the goal of protecting occupants from potentially injurious vibration, repetitive shock, crash and blast loads, is becoming a critical issue as the

cumulative impact of these load spectra on chronic health and acute injury are becoming better understood. Typically, adaptive vibration and shock mitigation systems have utilized commercial-off-the-shelf magnetorheological fluids (MRFs) with specified properties as opposed to properties that are optimized for the particular application. The objective of this talk is to discuss what properties are optimal for a number of particular applications such as vibration isolation, shock load mitigation, or earthquake hazard mitigation. A number of key non-dimensional parameters can be used to gain insight into how to define optimality for various applications including: Bingham number, Hedstrom number, Reynolds number, Mason number, dynamic range. Also, the trade-offs associated in designing an optimal MRF for a particular application are discussed. These trade-offs are illustrated using case studies from analytical, experimental and CFD studies.

**Biography:** Professor Norman Wereley's current research interests are focused on active and passive vibration and shock mitigation (especially occupant protection systems) using primarily magnetorheological materials, and soft actuators and soft robotic systems. Dr. Wereley has published over 220 journal articles, 16 book chapters, over 275 conference articles, and 20 patents. Dr. Wereley is Editor of the Journal of Intelligent Material Systems and Structures and associate editor of Smart Materials and Structures. He is the recipient of the ASME Adaptive Structures and Materials Systems. Dr. Wereley is the recipient of the ASME Adaptive Structures and Material Systems Prize (2012) and the SPIE Smart Structures and Materials Lifetime Achievement Award (2013). Dr. Wereley is a Fellow of AlAA, AHS, ASME, SPIE, and the Institute of Physics. He is also a Senior Member of IEEE. Dr. Wereley has a B.Eng. (1982) from McGill University and M.S. (1987) and Ph.D. (1990) from the Massachusetts Institute of Technology.

## Design of multifunctional composites and their advanced additive manufacturing

**Daniel Therriault**Polytechnique Montréal

Abstract: The manufacturing of smart composites composed of various functional components and built-in sensors is a serious technological challenge. Additive manufacturing (or 3D printing), known as a family of processes that joins materials to fabricate objects in a layer-by-layer fashion, is a powerful approach for the manufacturing of multifunctional systems. This talk presents an overview of our current research effort on the design of smart composites and the development of advanced additive manufacturing platforms featuring multi-material printing and robotic positioning systems. Examples of polymer-based composites featuring high mechanical stiffness and high temperature resistance, high electrical conductivity, piezoelectricity and printed structures with noise attenuation will be presented. The targeted applications are oriented toward the transportation, aerospace, microelectronics and biomedical fields.

**Biography:** Professor Daniel Therriault is a full professor in the Mechanical Engineering Department at Polytechnique Montreal. He currently holds two Chairs: a Canada Research Chair on the fabrication of advanced microsystems and materials, and the Safran-Polytechnique Industrial Chair on the additive manufacturing of reinforced polymers. He is co-director of the Laboratory for Multiscale Mechanics (LM2). His research interests are mainly related to additive manufacturing of advanced materials and multifunctional composites. Past contributions include the development of innovative additive manufacturing processes (e.g., freeform printing), the design and fabrication of nanocomposite materials for advanced aerospace applications, the 3D printing of carbon fiber-reinforced thermoplastic composites, etc. Several important scientific contributions (~80 refereed papers) in prestigious journals such as Nature materials, Advanced Materials and Small, and multiple innovations (7 Patents) originated from the research activities of Prof. Therriault's research team. He worked or is working on many collaborative research projects with partners such as Safran Group, Bombardier, Bell Textron Helicopter, 3M, Hutchinson, and the Canadian Space Agency. His current team is currently composed of 3 full-time RA, 1 part-time technician, 4 PDF, 10 PhD, 7 MS, and several undergraduate students.

## Acoustic black hole structures and their applications in vibration damping and noise reduction

Jinhao QIU

Nanjing University of Aeronautics and Astronautics

**Abstract:** Acoustic black hole (ABH) effect utilizes the gradient variance of the structural configuration or material properties to realize the diminishing wave velocity in the structure. The wave velocity decreases to zero in an ideal scenario, resulting in zero reflection. The main method to realize the ABH structure is to adjust

the structure through proper thickness tailoring in order to achieve energy capture in a certain area. It shows great advantages and potential application for flexural wave manipulation in thin-walled structure because of its high efficiency, broadband characteristic and flexible implementation. In this talk, the recent progress in modeling, analysis, implementation and measurement of ABH structures and their applications in wave manipulation, vibration damping and noise reduction is introduced. The topics in modeling, analysis, implementation and measurement of ABH structures include semi-analytical wavelet method for one-dimensional ABHs, FEM methods for two-dimensional ABHs and wave field visualization based on laser ultrasonic method. Applications of ABH structures include enhancement of energy harvesting, vibration damping based on energy focalization and ABH-based wide-band dynamic vibration absorber. Examples of cavity noise reduction using ABH panel is also introduced. Finally, the implementation of a one-dimensional ABH based on material stiffness gradation is demonstrated.

Biography: Professor Jinhao Qiu is Deputy Director, State Key Laboratory of Mechanics and Control of Mechanical Systems. He received the Bachelor and Master degrees in mechanical engineering from Nanjing University of Aeronautics and Astronautics, China, in 1983 and 1986 respectively, and the PhD degree in mechanical engineering from Tohoku University, Japan in 1996. He was a research associate from 1986 to 1989 and lecturer 1990 to 1991 at Department of Mechanical Engineering, Nanjing University of Aeronautics and Astronautics. He was a faculty member at the Institute of Fluid Science, Tohoku University from 1992 to 2006, where he was a research associate from 1992 to 1998, an assistant professor 1998 to 2000, an associate professor from 2000 to 2004 and a professor from 2004 to 2006. Since March, 2006, he is a Changjiang Chair Professor at the Nanjing University of Aeronautics and Astronautics. In 2011, he was selected to "The Recruitment Program of Global Experts". His main research interest is smart materials and structural systems, including development of piezoelectric materials and devices, vibration and noise control, structural health monitoring, and non-destructive testing. He has published more than 300 journal papers (including more than 230 SCI-indexed journal papers), 12 review papers, and more than 260 conference papers. He has also received 8 awards, including The 2002 Annual Dynamics, Measurement and Control Awards for Pioneering Achievements in the research of smart materials and structural systems from The Japan Society of Mechanical Engineers. He is the associate editor of Journal of Intelligent Material Systems and Structure, member of the editorial board of International Journal of Applied Electromagnetics and Mechanics and other four journals. He became ASME Fellow in 2014.

	Sampada Bodkhe and Paolo Ermanni, ETH Zurich, Zurich, Switzerland	
	Lorenzo Vigo, EPFL, Lausanne, Switzerland	
10:40 - 11:00	, , , , , , , , , , , , , , , , , , ,	
	Actuator  Vin Ving Jiang Prian Lynch Alex Ellery, and Fred Nitzsche, Carleton University, Ottowa, ON, Canada	
11:00 – 11:20	Xin Xiang Jiang, Brian Lynch, Alex Ellery, and Fred Nitzsche, Carleton University, Ottawa, ON, Canada  Shape Memory Polymer Composites and 4D Printing Technologies: From the Aerospace to Flexible Electronics	
11.00 11.20	Jinsong Leng and Yanju Liu, Harbin Institute of Technology, Harbin, China	
11:20 - 11:40	Impact of Thermally Sensitive Self-adaptive Structures on the Performance of a Cooling Device	
	M. Vilarrubí, J. Rosell, and J. Barrau, University of Lleida, Lleida, Spain	
	L. G. Fréchette, Université de Sherbrooke, Sherbrooke, QC, Canada	
11:40 – 12:00	Analysis, Simulation and Comparison of an Exoskeleton for Rehabilitation of Lower Limbs using Different Materials for its Manufacture	
	C. Hernández-Santos and Juan C. Tudón-Martínez, Universidad de Monterrey, Monterrey, Mexico	
	Fermín C. Aragón, Adriana Vargas-Martinez, Jorge de J. Lozoya-Santos, and Ricardo Ramírez-Mendoza, Tecnologico de Monterrey, Monterrey, Mexico	
	Lunch	
12:00 12:20	MB 9 – Rooms A & B	
12:00 – 13:20	IOC Meeting	
	MB 9 – Room F	

	Wednesday, October 09, 2019 (continued)		
	Plenary Speaking		
	Chair: Eric Chen  MB 9 – Rooms C & D		
	13:20 - 14:00	Acoustic Black Hole Structures and their Applications in Vibration Damping and Noise Reduction	
		Jinhao QIU, Nanjing University of Aeronautics and Astronautics, Nanjing, China	
		orphing Structures II & Structural Health Monitoring I	
	Chair: Haim Ab	Chair: Haim Abramovich  MB 9 – Rooms C & D	
	14:00 – 14:20	Conceptual Design for the Actuation and Skin Integration of a Morphing Leading Edge	
		Amin Fereidooni, Jan Marchwica, Natalie Leung, Jaye Mangione, and Viresh Wickramasinghe, National Research Council of Canada, Ottawa, ON, Canada	
(	14:20 – 14:40	A Morphing Winglet Concept with a Variable Stiffness Skin	
		Jian Sun, Harbin Institute of Technology, Harbin, China and University of Bristol, Bristol, UK Linzhe Du, Yanju Liu, and Jinsong Leng, Harbin Institute of Technology, Harbin, China Fabrizio Scarpa, University of Bristol, Bristol, UK	
	14:40 – 15:00	Surrogate Model of the Aerodynamic, Structural and Mass Properties of a Shape Adaptive Airfoil for the blade of the Bo105 Helicopter	
	15:00 – 15:20	Stephane Fournier and Benjamin K. S. Woods, University of Bristol, Bristol, UK  Fault Diagnosis of Adaptive Structures using Mahalanobis-taguchi System	
	15.00 - 15.20	Hiroshi Okubo, Toui Ushiku, and Marika Satoh, Kanagawa Institute of Technology, Atsugi, Japan	
	15:20 – 15:40	Time-reversal Imaging Method based on Laser Ultrasonic Guide Waves with Temporal Filter Method	
		Chenguang Xu, Ying Luo, and Baiqiang Xu, Jiangsu University, Zhenjiang, China	
	15:40 – 16:00	Coffee Break	
	Cassian O. Fla	MB 9 - Lobby	
	Chair: Wei-Hsi	ctro/Magneto Sensitive Materials I & Multifunctional materials and Composites I	
		MB 9 – Rooms C & D	
	16:00 – 16:20	Shear Behaviour of Magnetorheological Elastomers: Viscoelastic and Magnetorheological Properties	
		Andrea Spaggiari and Alberto Bellelli, University of Modena and Reggio Emilia, Reggio Emilia, Italy	
	16:20 – 16:40	Behaviours of Lithium-based Magnetorheological Grease under Triangular Quasi-static Test	
		Huixing Wang, Guang Zhang, and Jiong Wang, Nanjing University of Science and Technology, Nanjing, China Yancheng Li, Nanjing Tech University, Nanjing, China and University of Technology Sydney, Sydney, Australia Jianchun Li, University of Technology Sydney, Sydney, Australia	
	16:40 – 17:00	The Influence of GFRP Web Reinforcement on the Structural Behaviour of Deep Beams	
		Fawzi Latosh and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada	
	17:00 – 17:20	Design and Analysis of the Mechanical Properties of 3D Printed Sinusoidal Structures with Auxetic Characteristics	
		Diego A. Quevedo-Moreno, Armando Román-Flores, Enrique Cuan-Urquizo, Marcos D. Moya-Bencomo, Adriana Vargas- Martínez, and Ricardo Ramírez-Mendoza, Tecnologico de Monterrey, Monterrey, Mexico	
	17:20 – 17:40	Aerodynamic Control via Multifunctional Composite Kirigami Skins	
		Lawren L. Gamble, University of Michigan, Ann Arbor, MI, USA  Aaron Lamoureux, SpaceX, Hawthorne, CA, USA	
	17:40 – 18:00	Tuning the Hygro-mechanical Response of Paper-based Systems using Glycerol	
/		Isaias Cueva-Perez, Roque Alfredo Osornio-Rios, Aurelio Dominguez-Gonzalez, and Angel Perez-Cruz, Universidad Autonoma de Queretaro, San Juan del Rio, Mexico	
	18:00 – 18:20	The Effect of Adding CNT by Direct Compounding Versus Dilution of a Masterbatch on the Elastic and Electrical Properties of PP Copolymer Composites	
		Erika Palacios-Aguilar, Jaime Bonilla-Ríos, Adriana Vargas-Martínez, Jorge de J Lozoya-Santos, and Ricardo Ramírez-Mendoza, Tecnologico de Monterrey, Monterrey, Mexico  José Antonio Sánchez-Fernández, Centro de Investigación en Química Aplicada, , Saltillo, Mexico	

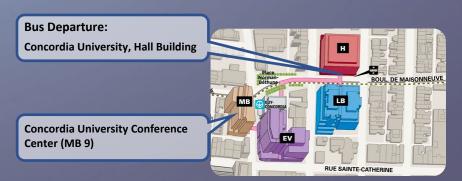

Thursday, October 10, 2019 – Student Presentations <sup>†</sup>		
	Session 9 – Electro/Magneto Sensitive Materials II & Shape Memory Materials II Chairs: Jorge de Jesús Lozoya-Santos and Zhengbao Yang MB 9 – Rooms C	Session 10 – Structural Health Monitoring II Chairs: Roeland De Breuker and Hiroshi Okubo  MB 9 – Rooms D
8:00 – 8:15	On the Role of Shape Factor on the properties of Magnetorheological Elastomers in Compression Mode Hossein Vatandoost, Masoud Hemmatian, Ramin Sedaghati, and Subhash Rakheja, Concordia University, Montreal, QC, Canada	Predictive Analytics of Structural Lateral Distribution Performance for an in-service Simply Supported Girder Bridge Qiwen Jin, Hefei University of Technology, Hefei, China Zheng Liu, University of British Columbia, Kelowna, BC, Canada
8:15 – 8:30	Enhancement of MR-effect in Magnetorheological Elastomers through Bi-layer Composition: Theory and Validation Ali Alkhalaf, Amir Hooshiar, and Javad Dargahi, Concordia University, Montreal, QC, Canada	Crack Friction-based Entropy Generation Monitoring During the Fatigue Lifetime of Composite Materials using Thermoelastic Stress Analysis Ricardo Marques and Afzal Suleman, University of Victoria, Victoria, BC, Canada Mehmet Yildiz, Sabanci University, Istanbul, Turkey
8:30 – 8:45	Dynamic Characterization of Magnetorheological Elastomers based on hard Magnetic Particles under Harmonic Loading Nader Mohseni, Masoud Hemmatian, and Ramin Sedaghati,	Estimation of the Capacity of a Bridge Deck and the Bridge Superstructure System Based on Ground Penetrating Radar Imaging Dipesh Donda, Farzad Ghodoosi, and Ashutosh Bagchi,
8:45 – 9:00	Concordia University, Montreal, QC, Canada  A Linear Model for Magnetoactive Elastomers  Alireza Beheshti, Ramin Sedaghati, and Subhash Rakheja, Concordia University, Montreal, QC, Canada	Concordia University, Montreal, QC, Canada  Automated Visual Assessment of Structural Conditions by FE Model Updating using Building Information Modeling (BIM)  S. Bahmanoo, M. Valinejadshoubi, F. A. Sakib, A. Sabamehr, A. Bagchi, and A. Bhowmick, Concordia University, Montreal, QC, Canada
9:00 – 9:15	On the Effects of Pre-strain on Dynamic Behavior of Magnetorheological Elastomers in Compression Mode Hossein Vatandoost, Masoud Hemmatian, Ramin Sedaghati, and Subhash Rakheja, Concordia University, Montreal, QC, Canada	SHM Point Arrangement for in-service Continuous Bridge with Consideration of Structural Robustness Qiwen Jin, Hefei University of Technology, Hefei, China Zheng Liu, University of British Columbia, Kelowna, BC, Canada
9:15 – 9:30	Training for Adaptive Three-dimensional SMA Bumps with Two-way Shape Memory Effect Chen Zhang, Hongli Ji, Lin Hao, and Jinhao Qiu, Nanjing University of Aeronautics and Astronautics, Nanjing, China	Experimental Broadband Signal Reconstruction for Plate-like Structures  Nicolas Venturini, Clarkson University, Potsdam, NY, USA and University of Bologna, Bologna, Italy  Marcias Martinez, Clarkson University, Potsdam, NY, USA and Delft University of Technology, Delft, Netherlands  Enrico Troiani and Francesco Falcetelli, University of Bologna, Bologna, Italy  Maria Barroso-Romero, Delft University of Technology, Delft, Netherlands
9:30 – 9:45	Influence of Vacuum and Low Temperature on Deployment Performance of Shape Memory Polymer Composite Hinges Van Luong Le, Yiyuan Liu, Vinh Tung Le, and Nam Seo Goo, Konkuk University, Seoul, Korea	Vibration-based Damage Detection in a Cable-stayed Bridge Zahrasadat Momeni and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada
9:45 – 10:00	Damping Characteristics of SCSMA Vibration Isolator Kasumi Hayashi, Shimpei Sato, Moe Kawamura, Nobuhisa Katsumata, and Ken Higuchi, Muroran Institute of Technology, Muroran, Japan	System Identification of Concordia University EV Building by Operational Modal Analysis Saikat Bagchi, Ardalan Sabamehr, Timir Baran Roy, and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada
10:00 – 10:15	Coffee Break	MB 9 - Lobby

Ì	Thursday, (	October 10, 2019 – Student Presentations (co	ontinued)
		Session 11 – Integration of Sensors and Actuators II Chairs: Marcias Martinez and Ayako Torisaka	Session 12 – Noise and Vibration control II & Morphing Structures III Chairs: Andrea Spaggiari and Luke Mizzi
	10:15 – 10:30	MB 9 – Rooms C  Experimental Characterization of Pull-in Parameters for	MB 9 – Rooms D  Response Modification Factors for Friction Dampers as
١	10.15 10.50	an Electrostatically Actuated Cantilever	per the 2015 National Building Code of Canada
		Andrea Sorrentino, Giovanni Bianchi, Davide Castagnetti, and Enrico Radi, University of Modena and Reggio Emilia, Reggio Emilia, Italy	Ali Naghshineh and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada Fariborz M Tehrani, California State University, Fresno, CA, USA Oscar Romero Galindo, Quake Tek Inc., Montreal, QC, Canada
1	10:30 – 10:45	Design, Prototyping and Validation of a New PVDF	Aero-engine Vibration Transfer Path Analysis
		Acoustic Sensor  Andrea Sorrentino, Yuri Ricci, Davide Castagnetti, and Luca Larcher, University of Modena and Reggio Emilia, Reggio Emilia, Italy	Seyed-Ehsan Mir-Haidari and Kamran Behdinan, University of Toronto, Toronto, ON, Canada
ĺ	10:45 – 11:00	Global-local Deformation Measurement using Multi Digital Image Correlation System	Optimal Magnetorheological Damper for Two-Wheeled Vehicle
		<b>Taijun Zhao, Vinh Tung Le, and Nam Seo Goo</b> , Konkuk University, Seoul, Korea	Manjeet Keshav, Eashan Dhawade, and Sujatha Chandramohan, Indian Institute of Technology Madras, Chennai, India
	11:00 – 11:15	Design and Experimental Validation of a Haptic Glove and Robotic Arm Powered by Magnetorheological Actuators for Dexterous Object Manipulation in VR	Intelligent Resonance Identification and Vibration Suppression for Industrial Robots Michael Newman, Ehsan Jalayeri, and Matt Khoshdarregi,
		Benjamin Bedard, Louis-Philippe Lebel, Bruno-Pier Busque, Marc Denninger, Guifré Julio, Alexandre Girard, and Jean-Sébastien Plante, Université de Sherbrooke, Sherbrooke, QC, Canada	University of Manitoba, Winnipeg, MB, Canada
	11:15 – 11:30	Experimental Assessment of a Linear Actuator Driven by Magnetorheological Clutches for Automotive Active Suspensions	Dynamic Analysis and Design Optimization of a Light- Weight Magnetorheological Elastomer-based Adaptive Vibration Absorber
		William East, Jérôme Turcotte, and Jean-Sébastien Plante, Université de Sherbrooke, Sherbrooke, QC, Canada	Mostafa Asadi Khanouki, Ramin Sedaghati, and Masoud Hemmatian, Concordia University, Montreal, QC, Canada
	11:30 – 11:45	Embedded SiC Fiber Sensor based Low-velocity Impact Monitoring of Composite Structures	The Effectiveness of Distributed Tuned Mass Damper Integrated with Adaptive MR Damper in Building
		<b>Hyunseok Kwon, Yurim Park, and Chun-Gon Kim</b> , KAIST, Daejeon, Republic of Korea	A.Bagchi and A. Torkaman Rashid, Concordia University, Montreal, QC, Canada
	11:45 – 12:00	A Gripping Force Self-sensing Microgripper with Jaws based on Optical Fiber Fabry-Perot Interferometers	A Finite Element Analysis of a Gull Wing through Varied Morphed Configurations
		Dai-Hua Wang, Jian-Yu Zhao, Jin-Long He, and Jie Wang, Chongqing University, Chongqing, China	Christina Harvey and Daniel J. Inman, University of Michigan, Ann Arbor, MI, USA
	12:00 – 13:15	Lunch	MB 9 – Rooms A & B
4		<b>Session 13 – Bioinspiration and Bioengineering II</b> Chairs: Jeong-Hoi Koo and Amin Fereidooni MB 9 – Rooms C	Session 14 – Energy Harvesting II Chairs: Jean-François Deü and Lawren Gamble MB 9 – Rooms D
	13:15 – 13:30	Biodegradable Starch-based Materials for Wound Dressing, Monitoring, and Healing	A Frequency Adaptive Package Design for Micro Piezoelectric Energy Harvesters
		M. Mohsen Delavari and I. Stiharu, Concordia University, Montreal, QC, Canada A. Perez-Cruz, Autonomous University of Queretaro, Santiago de Querétaro, Mexico	Guan-Yu Ke, Cheng-Hsiang Hsu, Yu-Chun Kuo, Wei-Ting Shih, Chao-Ting Chen, Shun-Chiu Lin, and Wen-Jong Wu, National Taiwan University, Taipei, Taiwan
1	13:30 – 13:45	Design of Bypass Rotary Vane Magneto Rheological Damper for Prosthetic Knee Application	Power Output Enhancement of Piezoelectric Energy Harvesters using Electrode Coverage Optimization
		Radhe Shyam Saini Tak and Hemantha Kumar, National Institute of Technology Karnataka, Mangalore, India Sujatha Chandramohan and Sujatha Srinivasan, Indian Institute of Technology Madras, Chennai, India	<b>Peyman Hajheidari, Ion Stiharu, and Rama Bhat</b> , Concordia University, Montreal, QC, Canada
		2	

13:45 - 14:00 14:00 - 14:15	Tendon-driven Catheter for Minimally Invasive Cardiac Surgery  Mohammad Jolaei, Amir Hooshiar, and Javad Dargahi, Concordia University, Montreal, QC, Canada	Investigation into Piezo-magneto-elastic Energy Scavenger with Exponentially Tailored Geometry Mahdi Derayatifar, Ramin Sedaghati, Muthukumaran Packirisamy, and Rama Bhat, Concordia University, Montreal, QC, Canada  MB 9 - Lobby
	Session 15 – Integration of Sensors and Actuators III & Multifunctional materials and Composites II Chairs: Mehdi Eshaghi and Abdolrasoul Sohouli MB 9 – Rooms C	Session 16 – Smart Structural Systems II Chairs: Aurelio Dominguez-Gonzalez and Yanju Liu  MB 9 – Rooms D
14:15 – 14:30	A PCB Process based Piezoelectric Pump Actuated by Circular Piezoelectric Unimorph Actuators (CPUAs) with Low Natural Frequency Dai-Hua Wang, Yun-Hao Peng, Lian-Kai Tang, and Meng-Zhen Wang, Chongqing University, Chongqing, China	Multi-mode Piezoelectric Shunt Damping of Plate-like Structures Johan Frederik Toftekær and Jan Høgsberg, Technical University of Denmark, Kgs. Lyngby, Denmark
14:30 – 14:45	Microcantilever Sensor for Biochemical Reaction Detection Shervin Foroughi, Jeetender Amritsar, Durai Chelvan, Shanmugamsundaram Packirisamy, and Muthukumaran Packirisamy, Concordia University, Montreal, QC, Canada	Investigating the Performance of Multiple Tuned Mass Dampers on Long Span Cable Stayed Bridge under Multiple Support Excitation Zahrasadat Momeni and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada
14:45 – 15:00	Polymer Gels: Investigation of the Swelling Induced Deformations with a Thermodynamically Consistent Chemo-mechanical Model Marco Rossi and Thomas Wallmersperger, Technische Universität Dresden, Dresden, Germany Paola Nardinocchi, Sapienza Università di Roma, Rome, Italy	Seismic Performance of Concrete Moment Resisting Frames in Western Canada Ali Naghshineh and Ashutosh Bagchi, Concordia University, Montreal, QC, Canada
15:00 – 15:15	Surface  Jean-François Chauvette and Daniel Therriault, Polytechnique  Montreal, QC, Canada  Nicola Piccirelli, Safran Composites, Itteville, France	
	Montreal City Tour <sup>‡</sup>	
19:00 – 21:00	Banquet <sup>§</sup>	

<sup>\*</sup> Concordia University Conference Center (MB 9) is located at John Molson Building, 1450 Guy St., Montreal, Quebec, Canada, H3H 0A1.

<sup>&</sup>lt;sup>§</sup> Join us for a special evening at VIEUX-PORT STEAKHOUSE (39, Rue Saint-Paul Est, Montreal, QC, H2Y 1G2). For those who did not attend the Montreal City Tour, a bus will begin boarding at 18:15 at Concordia University (Hall Building, 1455 Boulevard de Maisonneuve West, Montreal, QC, H3G 1M8) for a 18:30 departure. A bus will depart back to Concordia University at 21:30.

**VIEUX-PORT STEAKHOUSE** 

<sup>&</sup>lt;sup>†</sup> Student presentations will be evaluated, and the best student presentations will be awarded by ICAST 2019 at the Banquet.

<sup>\*</sup> Montreal City Tour incorporates the must-see highlights of the city in few hours. The guided tour will be started from the downtown and be finished in Old Montreal. The bus will begin boarding at 15:30 at Concordia University (Hall Building, 1455 Boulevard de Maisonneuve West, Montreal, QC, H3G 1M8) for a 15:45 departure. The tour will be finished at 18:45 at VIEUX-PORT STEAKHOUSE (39, Rue Saint-Paul Est, Montreal, QC, H2Y 1G2). It should be noted that the pre-registration is required for the Montreal City Tour. For those who did not pre-register, limited tickets are available at the reception desk on a first-come, first-served basis.
